

70 PERCENT LLSIL AND POVERTY GUIDELINES FOR 2019

The Lower Living Standard Income Level (LLSIL) and poverty guidelines are used to establish low-income status for *Workforce Innovation and Opportunity Act* (WIOA) Title I programs. Local Workforce Development Areas (Local Areas) use the LLSIL to determine eligibility of youth, eligibility of employed adults for certain services, and self-sufficiency. Local Areas should consult the WIOA for more specific guidance.

Tables 1 through 5 show the 70 percent LLSIL for western metropolitan and non-metropolitan areas, and for three specific Metropolitan Statistical Areas in California. In addition, each LLSIL table includes the 100 percent LLSIL that establishes the Department of Labor minimum self-sufficiency levels. The last column in each table shows the amount to be added to the figure for a family of six for each additional family member.

Since the income received during the six-month period immediately prior to the individual's application for WIOA funded services is used for income determination, each chart below shows the six-months, as well as the annual, figures for each family size. The six months figures were calculated by taking the 70 percent annual LLSIL figures, and dividing that number in half. If dividing the 70 percent annual LLSIL in half resulted in a fractional number, then the six months figure was rounded up to the nearest whole dollar. For example, in Table 1, a family size of four has a 70 percent LLSIL annual figure of \$35,681. When divided in half, the result is \$17,840.50. Rounding up to the next whole dollar produces a six months figure of \$17,841. A comparison of the applicant's actual family income during the six-month income determination period with the six-month figures on the charts enables the reviewer to immediately determine an individual's eligibility.
